

CYPHER.DOG®

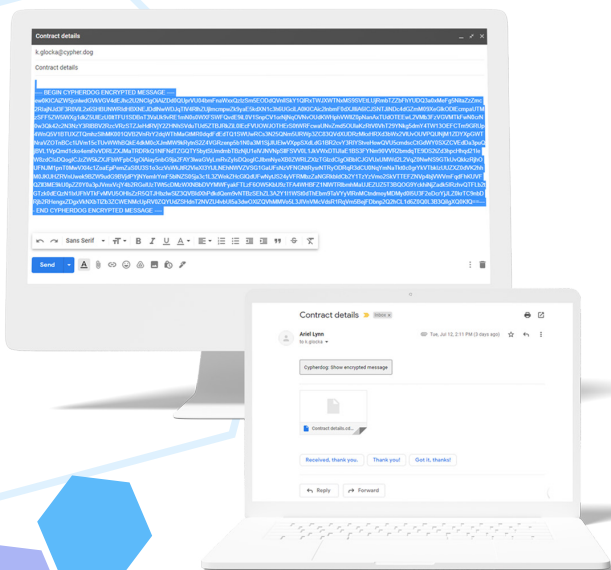

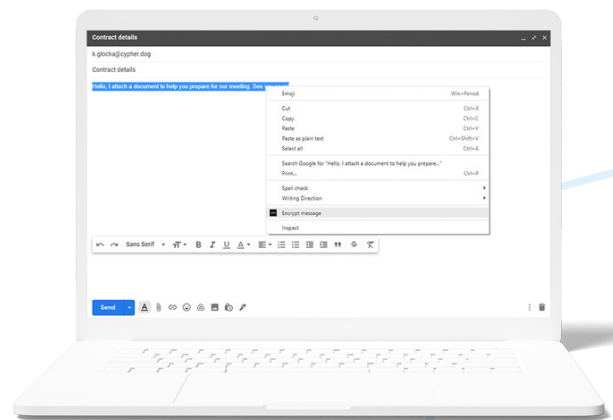

Cypherdog E-mail Encryption

Secure exchange of e-mail messages and attachments

How does it work?

One-click. Complete protection. Cypherdog encrypts e-mail messages with attachments and provides recipients with the verification of the sender's identity. Our **software is user-friendly** while maintaining the highest message security level.

You can use Cypherdog on the most **popular browsers** and e-mail client **manager platforms**, such as Outlook and Thunderbird. With just one click, you can use Cypherdog and encrypt e-mail messages.

Threats in cyberspace

E-mail is one of the most popular electronic communication channels. Like most digital services, it is vulnerable to cyberattacks, which may result in **unwanted access** to your mailbox and **disclosure of confidential information**. In the event of unauthorized use of the compromised e-mail box, message recipients cannot verify the sender's identity.

Cypherdog is a **comprehensive solution** to both threats. On the one hand, it ensures message encryption (hiding the content from unauthorized users); on the other hand, it allows the recipient to verify the sender's identity.

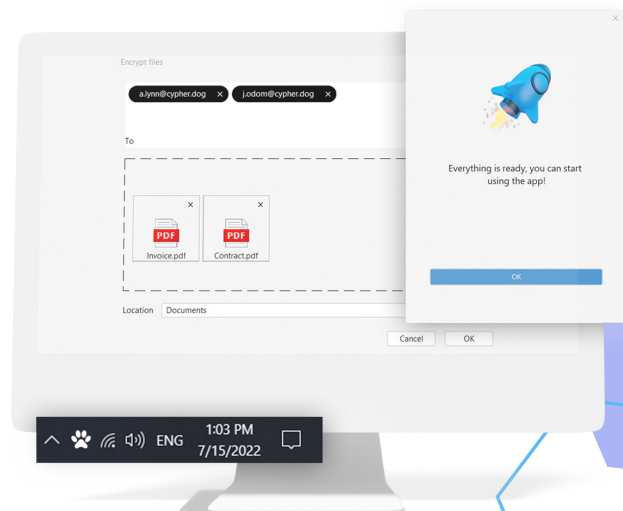

We protect you against

- corporate espionage
- data leaks
- new generation of ransomware with double extortion
- invoice hacking
- business e-mail compromise (#BEC)

We support you in becoming compliant with GDPR, Privacy Acts, DORA-2, NIS-2, and ISO 2700x implementations, among other regulations.

Friendly user interface

Cypherdog software focuses on simplicity and ease of use. During installation, the program will ask for the **password to your private key** and will allow you to **make a backup** of it (use a USB drive or print a copy of the key on a piece of paper, in the Business version backup is made automatically on company's server). After the installation is complete, **you can encrypt messages and send them via your e-mail immediately.**

 **Asymmetric encryption**

 **Absolute protection of private key**

 **No "trusted" third party**

 **Zero-knowledge security model**

 **No service provider access to data**

 **Lack of metadata & logs**

 **Identity trust methods**

Products specification	Free (after trial period)	Single User & Trial 14 days	Business
Encryption of content in e-mails	-	x	x
